

# eftpos™ Plus<sup>+</sup>

fully integrated payment  
solution software.

EftposPlus™ extends your existing PC based POS application to deliver a fully integrated payment solution. Activated by your POS at tender time, EftposPlus manages the card tender process from start to finish.

## Sophisticated & flexible...

EftposPlus provides a range of additional features to provide superior administrative and control functions that cater for both the Windows and Linux operating systems.

EftposPlus provides a highly reliable payment solution that has been proven in one lane corner shops, to multinational retailers managing thousands of terminals.

- + Transaction Processing
- + Network Management
- + Reporting & Reconciliation
- + Terminal & Network Diagnostics
- + Remote Administration

# eftpos Plus<sup>+</sup>

EftposPlus is a middleware solution which allows your POS application to accept card payments. Not only does it provide this core functionality, but also boasts a suite of tools which allow modern retail

enterprises to manage, report and support all aspects of the solution.

Hosting a comprehensive suite of reports which are independent of the POS, EftposPlus ensures that your business gains the ability to view and print useful reconciliation and settlement records. Featuring intuitive tools such as Receipt Browser, EftposPlus removes many of the reporting issues staff may have encountered using other systems. To ensure the highest level of reporting EftposPlus also enables a store's data to be replicated to a central

database to provide real time group level visibility of transactions.

EftposPlus has been developed with security as a focus. Understanding the need for customers to achieve security certification, implementation of EftposPlus helps businesses adhere to PCI DSS requirements by protecting cardholder and transaction information.

EftposPlus maintains the highest degree of system uptime by providing automatic failover to multiple gateways, or even secondary communication channels such as dialup or GPRS. Combined with the real time network management functionality of EftposPlus Explorer™, EftposPlus can control all aspects of your payment terminal estate. With over 80,000 lanes installed in conjunction with either Quest or other vendor payment terminals, EftposPlus is a proven solution that will meet all your payment needs.

## Why choose eftpos Plus<sup>+</sup> ?

- ◆ **MULTI ACQUIRER.**  
Supports both single and multi acquirer payment terminals.
- ◆ **SCALABLE.**  
Handles one through to thousands of lanes with ease.
- ◆ **MULTI PLATFORM.**  
A solution for both the Windows and Linux operating systems.
- ◆ **SOPHISTICATED DATABASE AND REPORTING TOOLS.**  
A self-maintaining database provides store level storage of transaction and settlement records independent of the POS, with a suite of useful retail payment reports.
- ◆ **INTERNATIONAL SUPPORT.**  
EftposPlus is independent of financial institutions or switches, communications networks, POS systems and payment terminals making it a global solution.
- ◆ **PAYMENT TERMINAL SUPPORT.**  
EftposPlus has been designed so that any terminal can be supported. Choose to use the Quest Swift PT or QT720 payment terminal, or any other alternative accredited device.
- ◆ **SIMPLE INSTALLATION AND CONFIGURATION.**  
With a "Wizard" based setup with the ability to pre-configure stores for a staged rollout, whole stores can be installed in minutes.
- ◆ **SOFTWARE DOWNLOAD.**  
Download new versions of software for all or selected stores with a click of a mouse.

## Advanced Features !

- ◆ **DESIGNED FOR WIDE AREA NETWORKS.**  
Can utilise an IP based WAN to centrally deliver transactions to financial institutions using high speed communications.
- ◆ **INBUILT ENCRYPTION AND COMPRESSION.**  
Transaction security maintained even when using open public networks such as the Internet.
- ◆ **DATABASE REPLICATION.**  
Store data can be replicated to a central database to provide real time group level visibility of card payments.
- ◆ **FULL COMMUNICATIONS REDUNDANCY.**  
Highest degree of system uptime through automatic failover to multiple gateways or secondary communication channels such as dialup or GPRS.
- ◆ **FULL NETWORK MANAGEMENT.**  
The EftposPlus Explorer provides a mechanism to remotely control all aspects of the payment network in real time, including terminal software download.
